

1040 Foam-Mask

Masking foam

High-quality polyurethane adhesive foam strip designed to seal and protect gaps between body parts, such as doors, hood, trunk and other. It's application reduces time during protection process before painting as well as after painting by providing smooth edge.

- ▶ prevents dust and other contaminants to damage the paint
- ▶ flexible material for application on various surfaces
- ▶ solvent resistant
- ▶ easy use with self-dispensing box

Temperature resistant
up to 95°C

Highly absorbent
polyurethane foam

Simple removal
without residues

1040 Foam-Mask

Masking foam

Description:

High-quality polyurethane adhesive foam strip designed to seal and protect gaps between body parts, such as doors jambs, bonnet or boot lid openings and other. Its application reduces time during protection process before painting as well as after painting by providing smooth edge. Compared to traditional flat masking tape this foam mask does not leave any paint lines after use and ensures efficient application and increased profitability.

Soft and conforming masking foam can be used in various shapes and surfaces, such as inside gaps and jambs, only using soft pressure of the fingers. High absorbing polyurethane foam leave no leaks, providing swift and efficient surface repair.

Technical information:

Material	Polyurethane Foam
Appearance	Open-celled flexible foam
Colour	White
Adhesive	Styren based rubber
Adhesion	19 mm
Diameter	100 N/25 mm
Length	50 m
Temperature resistance	95°C

Packaging:

Box, 13 mm x 50 m

Intended use:
